

Serone Capital Management hires Erika Morris and Wes Seifer to lead US Performing Credit as part of expanding North American platform

London, 14 January 2026 – Serone Capital Management (“Serone”), the London-based alternative credit specialist, today announces the appointment of **Erika Morris** and **Wes Seifer** as Co-Heads of US Performing Credit. Joining from Tikehau Capital, where they spent six years building and managing the firm’s US CLO platform, Morris and Seifer will further advance Serone’s expansion into the North American credit market.

Based in Serone’s New York office and joining Brent Hayes, Head of North America, the pair will focus on establishing and managing the firm’s US Performing Credit business. The US platform will be integrated with Serone’s London-based credit business.

Morris and Seifer’s successful joint track record stretches well before their time at Tikehau Capital, having spent nearly two decades investing in leveraged loans and high-yield bonds.

Neil Servis, Chief Executive Officer at Serone Capital Management LLP, commented, “The appointment of Erika and Wes marks a pivotal milestone as we extend our performing credit capabilities into the US. Their deep expertise in managing structured credit strategies and 20-year track record will be instrumental as we scale our platform in North America; a region that offers compelling value within the evolving alternative credit landscape.”

Erika Morris, Co-Head of US Performing Credit, added, “Serone’s reputation as a specialist in structured credit provides a powerful foundation. The opportunity to scale a performing credit business here, backed by the firm’s deep technical expertise and the scale of the US market, is incredibly compelling.”

About Serone Capital Management

Serone is an alternative credit specialist founded by CEO Neil Servis in 2009. From an initial focus on inefficient segments of the European credit market, Serone is expanding into North America with a platform that spans investments across structured credit, performing credit and special situations. The firm’s investment approach combines a top-down macroeconomic view with disciplined bottom-up credit analysis and an active trading mindset.
